

COMPRESSED AIR CONDENSATE CLEANER

Avilo OWS-3.5

The Avilo OWS-3.5 oil/water separator separates oil from condensate generated by compressed air systems. By guiding the condensate along various elements, the oil is efficiently separated from the condensate.

As the untreated condensate flows through the oil/water separator, the oil is separated from the condensate and adsorbed by the specially developed elements.

The elements have been developed using various adsorption technologies, resulting in a residual value of less than 10 ppm of oil after the separation process.

The OWS-3.5 has a small footprint and is easy to install thanks to its compact size.

Features

- Separation of all types of compressor lubricants.
- Compact design offers ease of use when installing and maintaining.
- Multiple condensate inlets
- Alarm indication

Specifications

Max. compressor capacity	3.5 m ³ /min.
Max. oil adsorption	4 liter
Inlet connection	1/2"
Outlet connection	1/2"
Residual oil content	<10 ppm
Housing material	PE
