SunTex 80/90

SunTex 80/90 is a durable vinyl-coated polyester mesh designed for exterior solar shading, blocking 80–90% of the sun's heat before it reaches your windows. Ideal for window screens, door screens, patios, motorized shades, and canopies, SunTex offers powerful sun protection without sacrificing style or airflow.

Pet-resistant, mildew- and fade-resistant, and easy to clean, SunTex is perfect for both DIY projects and professional installations. Beyond comfort and privacy, it also helps reduce energy costs by minimizing solar heat gain, making it a smart, all-season solution.
